Truck capacity: 250,000 pcs (approximately 20 tons)

Scope of application

- Today polypropylene bags are the most ideal packaging for storage, transportation and packaging of various products. Strength, unpretentiousness and lightness (bags measuring 55×105 cm weigh only 75-80g) are the main advantages of polypropylene bags.
- In addition, polypropylene bags allow packaged products to “breathe”. Due to weaving, air quietly penetrates into the bag, preventing the mustiness of the product, in view of which polypropylene bags are widely used in the milling, grain processing, animal feed industry. Flour does not dampen in these bags.
- It's possible to use in construction and domestic needs. Polypropylene bags due to their durability are also used for waste disposal. They are successfully used in construction, urban landscaping, and the cleaning of construction waste.

Sizes of polypropylene bags

Height: 105 cm

Width: 55 cm

Weight of polypropylene bags

weight of one bag: 82g
